GOVERNMENT-WIDE ACQUISITION CONTRACTS FOR IT PROCUREMENT.

NIH
National Institutes
of Health

CIO-SP3 is a $20 billion, 10-year, Government-Wide Acquisition Contract (GWAC) for IT services/solutions that can be used by any federal civilian or DoD agency to fulfill IT requirements.

e v e r y t h i n g   I T ℠

Scope: CIO-SP3 covers *everything IT*℠ including cloud computing, security/cybersecurity, data center consolidation, biomedical information services, health IT, imaging, mobility solutions, software development, enterprise data management, systems engineering, identity and access management, ERP IT infrastructure, workforce management, capital planning and investment, and more.

Quality: NITAAC contract holders are rigorously vetted prior to award so you are assured of the highest quality responses. An experienced team of Contracting Officers and IT Specialists are standing by to respond to your questions within 1 hour.

Ease: End-to-end management is easy with NITAAC's secure, web-based electronic-Government Ordering System (e-GOS), that automates task order competition, awardee selection and notification. The contracting process is completely controlled by your agency's procuring CO, who can easily add customized terms and conditions at the task order level.

Value: Best available ceiling rates are negotiated at the master contract level, and delivery order competition drives prices even lower. Contract access fee not to exceed 1%. You also benefit from value-added services like complimentary requirement assessments returned within 24 hours, and free training worth two continous learning points available on-site, in the classroom or via WebEx.

Speed: Streamlined ordering and procedures under FAR subpart 16.505 save your agency time, money and resources. Synopsizing or posting on FedBizOpps is not required. The contract is flexible in support of Agile development and CONUS/OCONUS procurements.

IT requirements are competed within a diverse group of industry leaders and innovators, vetted for their technical capabilities and expertise through a rigorous source selection process:
